SECURITY EQUIPMENT CORPORATION COMPLETES ISO 9001:2000 CERTIFICATION

With the goal of providing our customers with a globally accepted and accredited quality management system, Security Equipment Corporation recently completed its ISO 9001:2000 certification. The certification process improves Security Equipment Corporation's customers' satisfaction, enhances their competitive edge, increases their credibility, and lowers trade barriers. In addition, the certification improves product consistency, quality, overall organizational performance and profitability.

ISO 9001:2000 Certification provides objective proof that Security Equipment Corporation has implemented an effective quality management system, and that it satisfied all of the requirements of the applicable standard.

The International Standard Organization (ISO) was founded in 1946 to develop a common set of manufacturing, trade and communication standards. ISO is a network of the national standards institutes of 147 countries with a Secretariat in Geneva, Switzerland, that coordinates this system. The American National Standards Institute (ANSI) is the U.S. representative to the ISO.

"SEC's ISO 9001:2000 Certification ensures our customers total satisfaction in our manufacturing quality. It is the premier quality accreditation and we are happy to meet its standards." – Robert Nance, V.P. of Operations at Security Equipment Corporation.
