Fenton, Mo. 63026

Dear Mr. Nance:

I wanted to take this opportunity tell you about our experience with Security Equipment Corporations Sabre MK-9 5.0 Oleoresin Capsicum.

As the institution's Armory Officer and Chemical Agents instructor, I test and order all chemical agents for our prison. After several conversations with you about Sabre, I ordered the MK-9 5.0. The 5.0 is issued to our on duty incident responders; all other officers carry other company's O.C. products. As usual, people are resistant to change. However, after only a couple of Sabre deployments, staff loves the Sabre product. Other staff has requested to carry the Sabre as well.

Our experience is that the Sabre is more consistent in its heat and the ultraviolet dye works well for identifying involved combatants. Most importantly, the Sabre gets the desired effect of stopping fights, reducing the need for any further use of force and the safety of our staff.

We are very happy with the effects of the product.

Shoul you have any questions
