

Rassettica Testing Limited

Testing, Forensic Examination, Prototype Evaluation of Conducted Energy Weapons

Certificate of Examination

August 30, 2016

We have examined electrical data taken from the Ruger RU-S-J185 stun gun. The data was acquired in a controlled and consistent manner and provided to us in binary file format.

The Ruger RU-S-J185 produces, on average, electrical charge of 0.515 microCoulombs of charge per pulse.

Pain results from charge (in microCoulombs) delivered to the body. However, sensation of pain is different for different people and is discriminated by gender, age, and physical build.
